

## Justification

I have a passion for developing projects for real world issues. This is an urgent and important issue that still needs solutions. Exposure to working with clients and receiving customer feedback.

## Functions

Centralizes disaster resources into one site. Users can filter resources to what they need. We offer resources for people in need and for those who want to give back.

## Technology

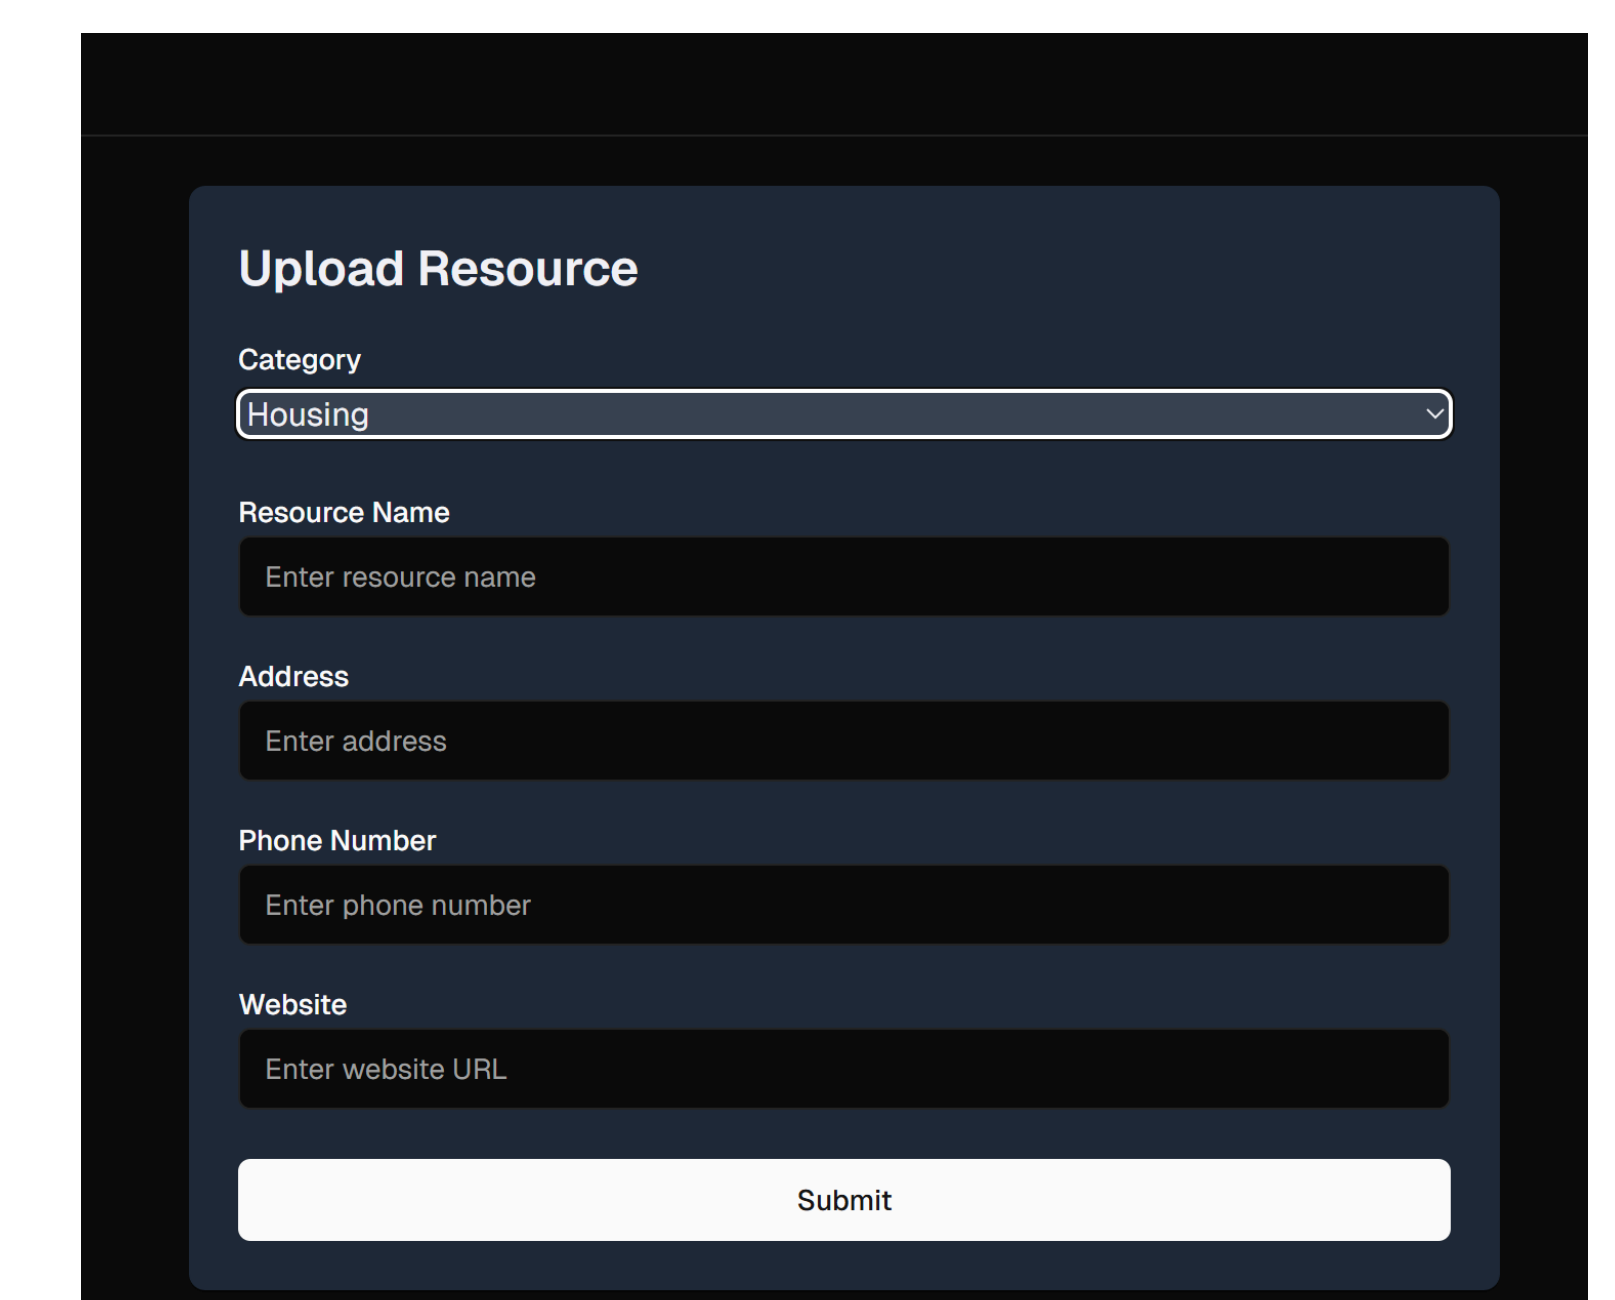

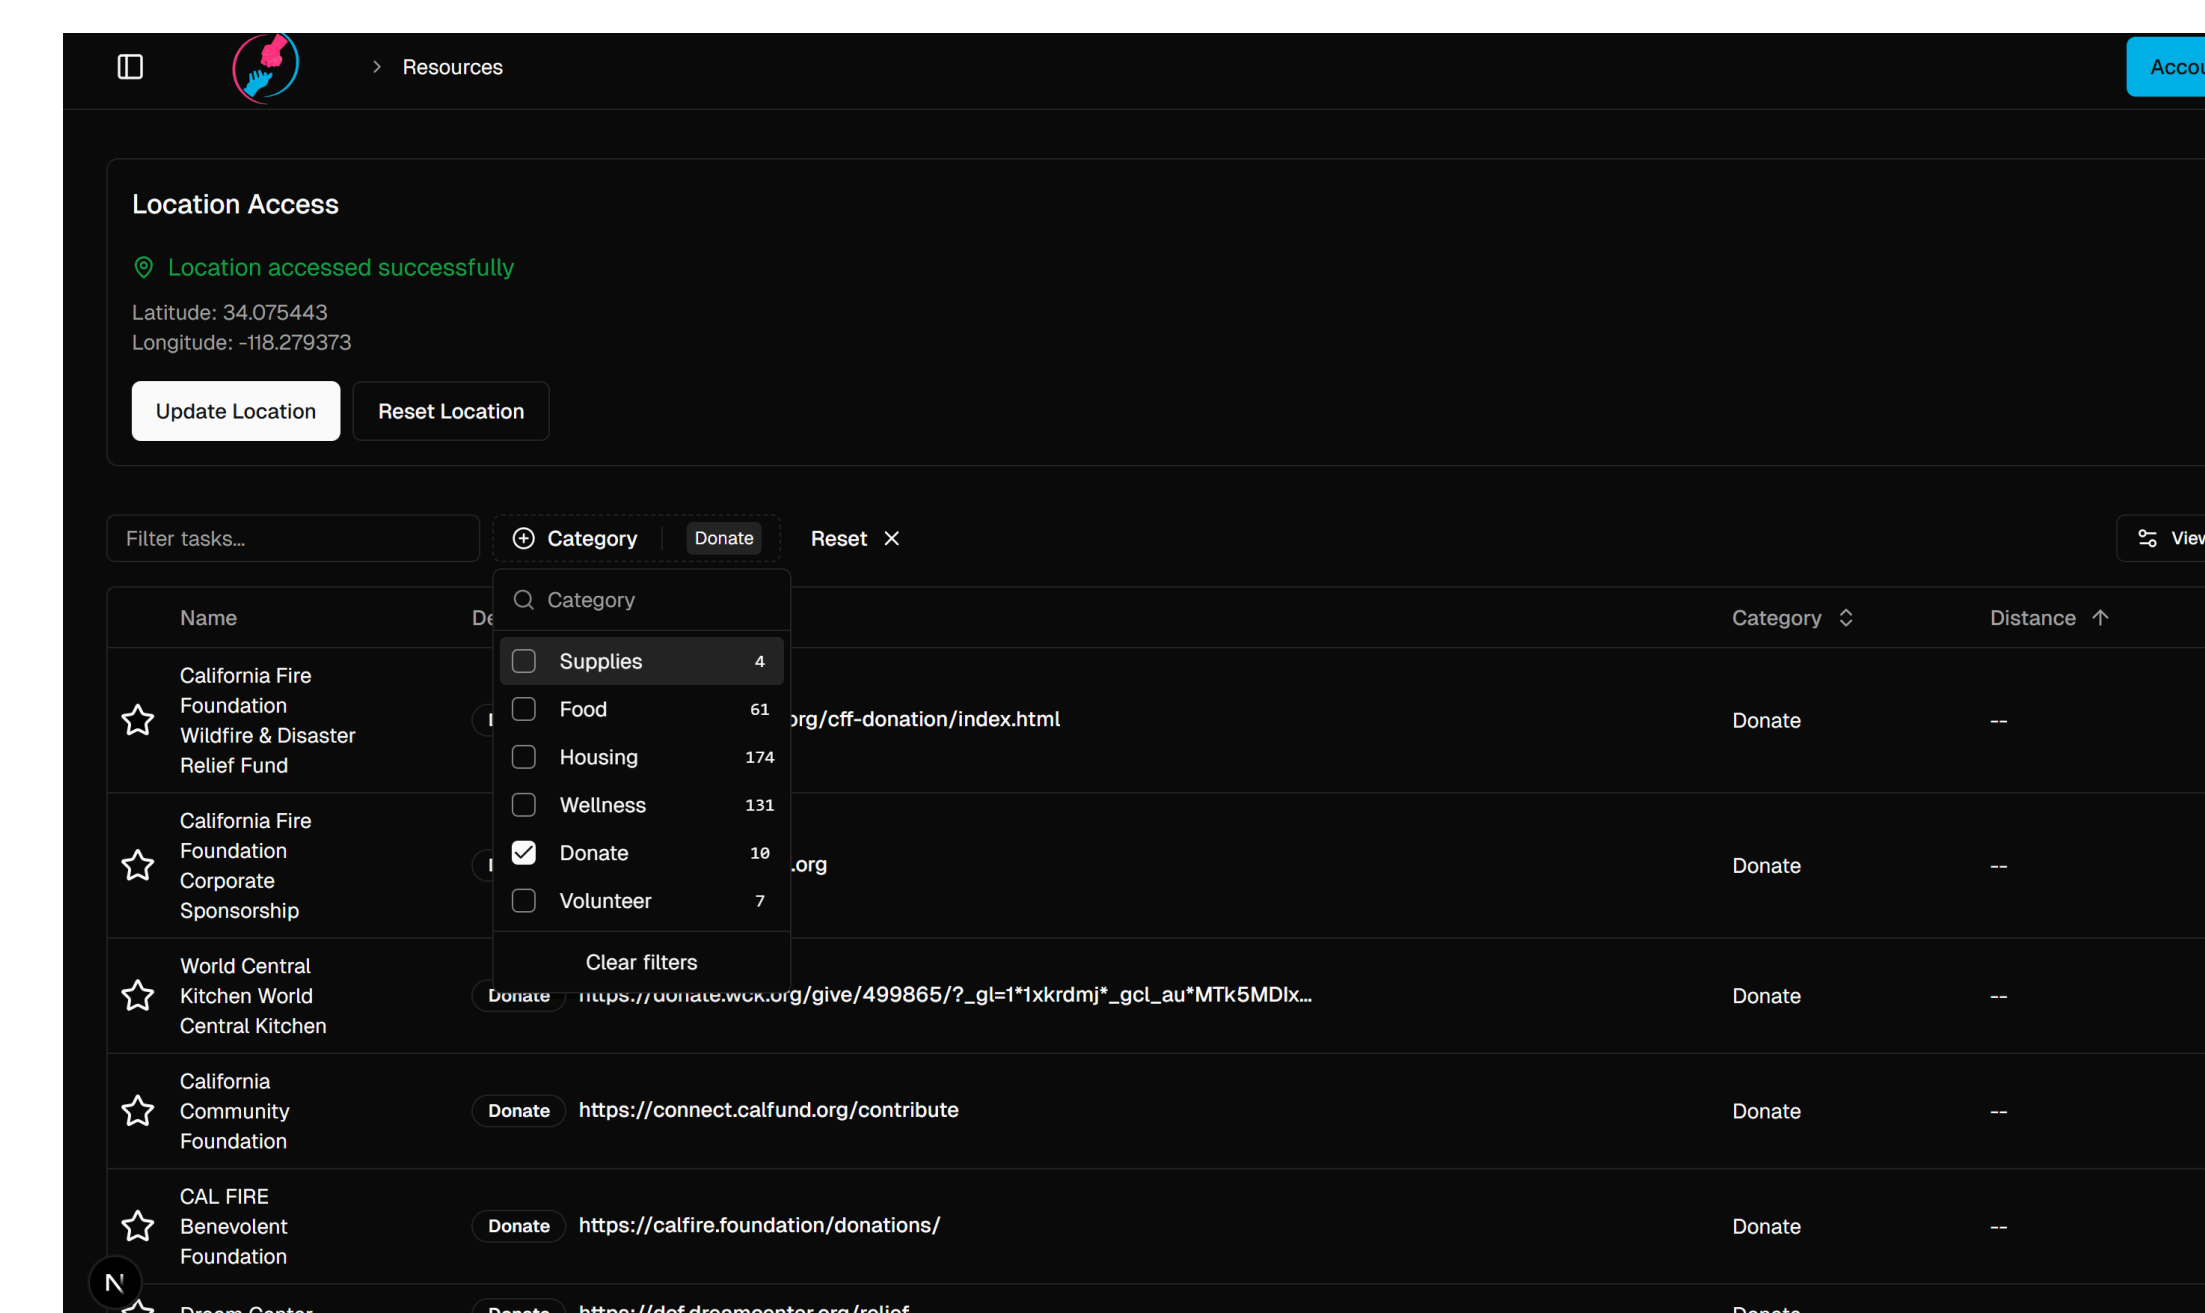

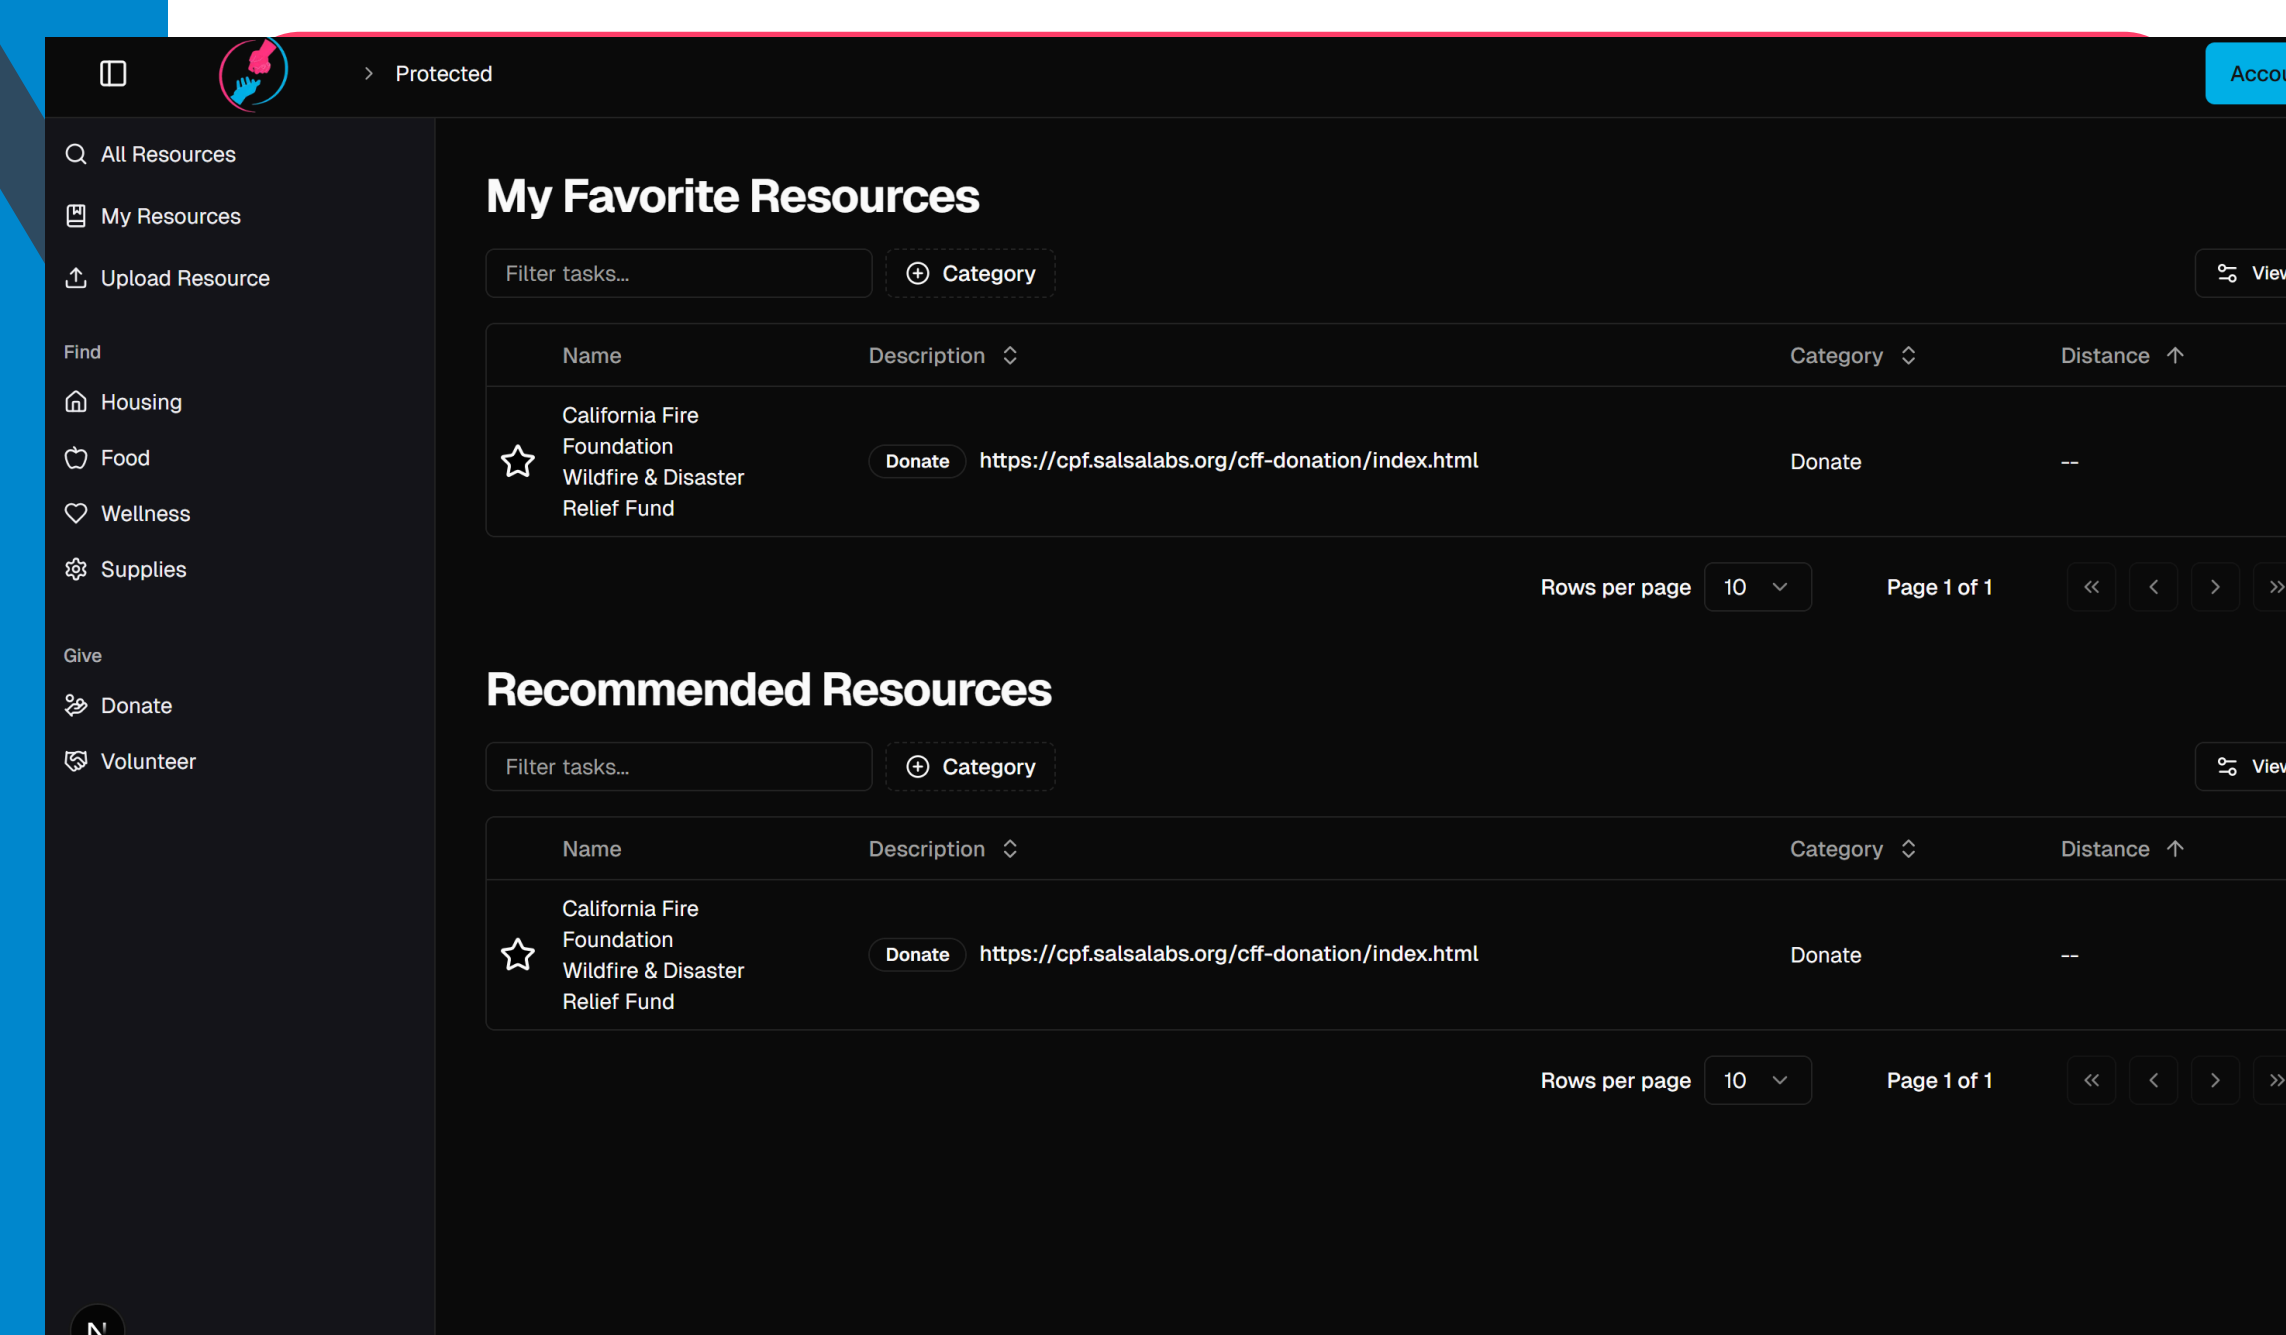

Next.js for front-end and functionality, Supabase for backend, and Vercel for hosting.

NEXT.js  supabase  Vercel

## Future Plans

Our vision for future implementations is to let users post their own resources and have an algorithm that matches users to existing resources that match their needs.
